

Blog 2

This is the second week of the internship. I had a meeting with my this week buddy. We had a chat and discussed the stuff that we learned from the internship.

This week we learned the whole process of the problem tree. I really enjoyed how everything comes together and how we were able to identify the problem and find a solution for it. I was also having the same conversation with my weekly buddy and we also discussed our business idea and what kind of problems do we think are in our way to achieving our goal. Overall, It was a very productive week as I learned a lot and also got a bit clearer idea about what I exactly wanted to do.
